

**]project-open[ releases Version 3.0 of its Open-Source Software ]project-translation[**

The software is designed for small and medium businesses and now runs with a free database on Windows and Linux.

**Barcelona, September 29th, 2005: ]project-open[, a provider of open-source based project management software announces the release of Version 3.0 of ]project-translation[. The new version runs with the free PostgreSQL database on both Linux and Windows, allowing SMEs to take advantage of Internet technology with no license cost.**

"The open-source based ]project-translation[ project management solution has been designed for the specific needs of small and medium companies in the field of translation and localization," says Frank Bergmann, Managing Director of ]project-open[. "Working with ]project-translation[ allows automating tasks using embedded workflow technology. Projects are managed more cost-efficiently and the use of our system leads to faster deliveries and therefore to a competitive advantage."

"The open-source idea is just beginning to gain momentum in the market for project management software in the translation and localization industry. It will ultimately revolutionize the market; we want to give our customers the chance to take advantage of these developments as soon as possible."

]project-translation[ is an integrated translation workflow and project management system for translation agencies (SLVs, MLVs) and language service providers in general. It covers the entire project life cycle from sales (CRM-light), staffing and project execution (timesheets, incidents and discussions, file storage and oversight) to invoicing and payment.

With ]project-translation[, any authorized user can access the system anytime and from anywhere, evaluating relevant projects and process information. The integrated financial controlling module allows checking profits and losses for projects and customers.

The ]project-translation[ architecture is based on Internet technology and is designed for mission-critical applications with high scalability and a sophisticated role-based permissions system.
